Using My Classrooms
and a Class ~~Home~~ Webpage
oops

to Enhance the Class Experience

sometimes the appropriate tool
really is pen and paper
with all its imperfections

for example "working problems" in ~~tecffical~~ technical
courses is frequently done this way by teachers and
instructors, even if one can later convert it into a
slick software file of some kind.

A PDF scan of the paper handwork is appropriate
to convey such information content.

Or talks given on handmade transparencies
can be and still are used frequently in certain fields,
but a color scan can make it "electronic"
and easily shared.
